Sch.--In giving the above method of tracing curves, it is not meant that the processes there detailed are necessarily to be gone through with in the order given, nor in fact that they are all to be applied in tracing the same curve. These are only means to be used as occasion may require. Again, while these processes are general, and constitute what is usually called tracing curves, there are other methods better adapted to certain cases. Of these we shall give, in the sequel, three; viz., one when the equation can be put into the form $y = px$ ix), in which $y = p(x)$ is a diametral locus to that represented by the entire equation; another by transformation from one set of rectilinear co-ordinates to another; and a third by passing from one system of co-ordinates to another, as from rectilinear to...
