

A Laboratory Guide for Students in Physical Sciences (Paperback)

Filesize: 1.2 MB

Reviews

This sort of publication is everything and made me seeking forward and much more. Better then never, though i am quite late in start reading this one. I am easily could possibly get a delight of reading through a created pdf.

(Quinton Balistreri)

A LABORATORY GUIDE FOR STUDENTS IN PHYSICAL SCIENCES (PAPERBACK)

To get **A Laboratory Guide for Students in Physical Sciences (Paperback)** eBook, you should refer to the link below and download the file or have access to additional information which are related to **A LABORATORY GUIDE FOR STUDENTS IN PHYSICAL SCIENCES (PAPERBACK)** book.

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1908 Excerpt: . be determined, from the same paper, and weigh it on the same balance. Then the area of the figure is equal to its weight divided by that of the square. The balance is one of the most important measuring instruments, and one of the most accurate. For this reason it is desirable to reduce, whenever possible, measurements of high accuracy to that of weight. The sensitiveness of a certain balance is defined as the angle through which it will turn when the difference between the weights in the pans is lmg . Thus, if s stands for sensitiveness, d for the angle of deflection when the difference in the weights is p mgr., then $s = d/p$. A more convenient form for computing the sensitiveness is derived as follows. Let (Fig. 8) l stand for the length of either arm of the balance, w the weight of the beam, with the center of gravity at G , P and p the weights in the pan and their difference respectively, then, for a deflection θ , when equilibrium is reached, we have $(P + p)l \cos \theta = Pl \cos \theta + wd \sin \theta$, where d is the distance of G from the fulcrum. From this it follows $\tan \theta = pl/wd$. We see from this that the sensitiveness is independent of the load P on the pans. However, if we consider the fact that the beam is not absolutely rigid, it can readily be followed that the...
