The discussion of the uniform photometric orbit is now taken up again because it is believed some improvement can be made. The probability that the component stars are elliptical was suggested by Schlesinger, but the matter was not considered in the computations, evidently because of the uncertainty of the photometric work and because of the inconvenience of the methods of determining the ellipticity then in use. In the present discussion of the system the ellipticity shows up very distinctly and becomes of considerable importance, therefore, in deriving the orbital elements. The normal magnitudes are repeated from the Allegheny publication in the following table. The phases of the first column have been changed in the fifth to refer in all cases to the time of the preceding minimum, which...
